In response to cleaning up the soils in certain areas should be a good idea if proven to be worthwhile in the long run.

I participated in this project at 3⁶25 Garfield Street, Denver, Colorado 80205 and property did not contain arsenic or lead.

The concern is in areas other than residences in zone 80205, such as Lowery, Fitzsimons and Stapleton. Also, properties build on Landfills and former dump should be considered.

Thanks for my opinion.

Sincerely,

Ardella Ikner
